

Date	7 th october 2022
Team id	PNT2022TMID39421
Project name	An IOT based Railway tracking system using GPS
Maximum marks	4marks

SOLUTION ARCHITECTURE:-

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

A->User gets SMS when train gets delay, by default

B->User can track location of the train at anytime using mobile application
